

## Desired Clarifications in the Management Plan for JDSF

- During the Interim Period, planned revenue generation from timber harvesting should not significantly exceed operational costs, including the rebuilding of adequate staff, developing inventories for timber, wildlife, and botanicals, and correcting problems that a reasonable land manager would not allow to go through another winter period for fear of significant environmental degradation or failure. Long-term initiatives should be limited in the Interim Period to completion of the road inventory and rehabilitation plan, an expanded timber inventory, and demonstration and research related expenditures
- An advisory body (the DSFAG or, when ready, the JDSF Advisory Group) shall review all timber harvest plans in sensitive areas and, if practical, all plans during the interim period, provided this review does not adversely impact JDSF staff's ability to move forward with the 2008 timber sale program. The proposed harvest plan of the PSW Research Station in Caspar Creek shall have advisory body review.
- Amend sentence 2 in paragraph 2, p. 7 of the Draft Final Forest Management Plan and the identical sentence on page II-6 of the DEIR:

~~The major purpose of the forest structure condition goals is to provide forest stand conditions and management histories in the Forest suitable to a wide range of research investigations and demonstration opportunities, as well as a broad range of valuable habitats.~~ The goals for future forest structure conditions shall reflect the multiple management goals of research and demonstration, forest restoration, promotion and maintenance of watershed and ecological health, sustained-yield timber management, and recreation and human enjoyment.
